

INTEGRATED RISK MANAGEMENT SOLUTIONS

No telecommunications company operates in a risk-free environment. Corporate governance, financial risk, and regulatory compliance are on the minds of executives at leading telecom organizations. Regulatory mandates like Sarbanes Oxley include extensive reporting and disclosure requirements. Threats from natural and man-made causes create risks that are increasingly pervasive and may be potentially disruptive to your enterprise. Just as you need a strategy to mitigate financial and regulatory risk, you also need cohesive and executable disaster recovery and business continuity plans so that you can continue to provide products and services during man-made or natural disasters affecting your business.

Key Benefits

- Reduced Operational Surprises
- Reduced Losses Through Mitigation
- Employee Understanding of Roles and Responsibilities in the Event of Disaster
- Improved Risk Response
- Orderly, Planned Communication with Customers and Employees
- Increased Workflow Enabled Processing
- Increased Employee Safety
- Proactive Backup Strategy
- Reduced Operating Costs
- Improved Profitability Through Risk Mitigation

DISASTER RECOVERY PLANNING SERVICES

DISASTER RECOVERY PLANNING SOLUTIONS

BIZPHYX has developed a core practice in disaster recovery planning through its involvement with the TL 9000 telecommunications quality standard. The standard requires a documented plan to ensure that organizations can continue to provide products and/or services in the event of a disaster affecting their facilities or infrastructure. **BIZPHYX**'S disaster recovery planning services provide the tools you need to deal effectively with uncertainty and minimize risks to achieving your bottom line business objectives. Our services are uniquely designed to help you align your risk strategy while minimizing operational losses and managing cross-enterprise risks.

The **BIZPHYX** risk management process is based on a Business Excellence system design and deployment. It starts with the application of proven gap analysis techniques to detect the vulnerabilities that can compromise your organization, recommends specific improvements and measures, and puts an appropriate tracking system in place to provide metrics and analysis. Our risk management modules cover the following two areas:

- **Business Continuity Strategies.** Organizations need a proactive approach to business stability that builds a framework based on current infrastructure and potential risks. **BIZPHYX**'s Business Continuity Strategy uses logical processes and specialized tools to assess risk to facilities, data, customers, and employee safety and to build a plan that ensures the company's ability to conduct business in the event of an emergency. It includes risk analysis, detailed recovery programs, key contact lists, disaster avoidance, and prevention procedures, and reviews at regular intervals.
- **Disaster Recovery.** An effective crisis and disaster recovery plan is one that is ongoing and is tested on a recurrent basis. **BIZPHYX** helps companies to develop and install tactical disaster recovery plans to enable employees and management to communicate with key external and internal contacts, conduct media relations, and operate successfully until the company returns to normal.

PERFORMANCE EXCELLENCE
